Bringing Computer Science and AI Literacy to Every Classroom: Practical Strategies for Success
Presented by: Dr. Leanna Prater, Experienced Educator, Senior Professional Learning Services Manager, US, LEGO Education

Goals: My goal is to integrate this innovative curriculum into our current and future technology enrichment programs. I strongly believe that STEM education provides valuable opportunities for all students to develop critical thinking, creativity, problem-solving skills, and a strong foundation for the future.

Professional Impact: The unplugged activities were a valuable learning experience throughout the seminar. I found them engaging and practical, and I would definitely implement these ideas in my own programs.

Student Impact: The information and knowledge gained from this experience will contribute tremendously to our students development. These types of classes have been, and will continue to be, an important part of our students overall education. We have seen significant improvements in teamwork, collaboration, and curiosityeven among students who may have challenges expressing themselves.
